Core Solutions - Health Checks

Solution Overview

Non-invasive health checks are used to analyze your Microsoft SQL Server environment and check for potential problems before they cause unexpected issues or downtime.

Non-Invasive

Health Checks do not require anything to be installed on your server. Remote access is optional as well. If you prefer to keep things in-house, we can provide a tool to run on your laptop that will analyze your server and output the results.

Comprehensive

Our Health Check tool will thoroughly analyze your server for things like proper instance & database settings, indexing, error logs, wait stats, performance stats, corruption, backup status, and much more.

Deep Analysis

When you provide the results to SqlCS, they will be reviewed in detail by a **Microsoft Certified Solutions Expert** who will compile a full report of the findings. We will then

schedule a phone call to share the report, review recommendations, and answer any questions.

Next Steps

We leave it up to the client to decide how to proceed with our recommendations. If your staff is comfortable making the changes themselves, that's great! If you would like to hire SqlCS to implement any or all of the recommendations, we can provide Consulting Solutions to do so. Perhaps you have internal IT staff that would prefer to do it themselves and learn along the way. That's fine too, and we can provide Coaching Solutions to help teach and guide them through the process. Consulting and Coaching is available at standard hourly and day rates.

2020 Pricing

Health Checks are available as a one-time service or as a recurring subscription at a discounted price. We recommend all SQL Server instances go through a Health Check at least annually, and more frequently for busy or more critical systems.

2020 Special! - For all of 2020, one-time Health Checks are just \$300*. On top of that, receive a \$200 credit if you choose to have SqlCS perform work to remediate issues uncovered from the Health Check. If you want to tackle remediation yourself (which is a great learning opportunity), get a follow-up Health Check for just \$200!***

*Limit 2 SQL Server instances at promotional discounted price.

**\$200 credit per discounted Health Check purchased. Maximum \$400 credit. Remediation work is billed at standard day rates (½ day minimum).

***Follow-up Health Check(s) limited to SQL Server instance(s) that underwent Health Check during 2020 promotional period.

Frequency	Price per SQL Server Instance	Discount
One-Time Health Check	\$400 \$300 - 2020 Special!	None 25% - \$100 off

Quarterly Health Checks	\$1600/year \$960/year	40% (\$240 per check)
Monthly Health Checks	\$4800/year \$2,400/year	50% (\$200 per check)
